Edgeless Systems is a cybersecurity startup based in Germany. Our confidential computing products elevate the security of your applications and workflows to unprecedented levels. We make always encrypted and verifiable processing of sensitive data scalable, thus enabling new and exciting forms of trustworthy data processing. With Edgeless Systems, your data and code are always protected — whether at rest or in use.

Our company is built on the principles of open source and is a member of the Confidential Computing Consortium including Microsoft, Google, Red Hat, Intel and Huawei.
